## Prefabricated lifting stations for clean water

### MINIBOX Series

#### MARKET SECTORS

DOMESTIC.

#### APPLICATIONS

- Suitable for delivering clean water to main sewer lines located at a higher level, or where gravity drainage is not possible.

#### SPECIFICATIONS

- The station is equipped with:
  - **DOC submersible pump**, with flow rate up to 230 l/min and head up to 11 m. Passes suspended solids up to 10 mm diameter. Equipped with float switch for automatic operation.
  - 85 litres high density polyethylene **tank**.
  - 1 1/4" **flexible pipe** equipped with a check valve; left or right-hand connection.
  - **Power cord** outlet.
  - Three types of 40 mm diameter pipe inlets.
  - **Screens**.
  - **Basin** to be filled with sand or gravel to filter solid particles.

- The Minibox station can be equipped with a **DOC3** (0,25 kW rating) or a **DOC7** (0,55 kW rating).
- **Installation is quick and easy**: just connect the pipes and plug it in.
- Minibox can be installed on the floor or buried in a suitable structure (to withstand vehicle or foot traffic).

#### ACCESSORIES

- An **optional watertight lid** (substituting the screens) can be installed for indoor use.

#### IDENTIFICATION CODE

EXAMPLE : MINIBOX DOC 3  
Lifting station MINIBOX series with DOC 3 submersible electric pump.

## MINIBOX SERIES OPERATING CHARACTERISTICS AT 50 Hz

### HYDRAULIC PERFORMANCE TABLE

PUMP TYPE	RATED POWER		Q = DELIVERY									
			l/min	0	25	50	75	100	125	135	175	225
			m <sup>3</sup> /h	0	1,5	3	4,5	6	7,5	8,1	10,5	13,5
	kW	HP	H = TOTAL HEAD METRES COLUMN OF WATER									
DOC3	0,25	0,33	6,9	6,3	5,6	4,7	3,7	2,5	2,0			
DOC7	0,55	0,75	11,1	10,8	10,4	9,9	9,3	8,5	8,1	6,5	3,7	

These performances (referred to the single pump) are valid for liquids with density  $\rho = 1,0 \text{ kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{s}$ .

**Prefabricated lifting station for clean and grey water in compliance with EN 12050-2 standard**

**MIDIBOX Series**

**MARKET SECTORS**

DOMESTIC.

**APPLICATIONS**

- Suitable for delivering clean and grey water to main sewer lines located at a higher level, or where gravity drainage is not possible.

**SPECIFICATIONS**

- The station is equipped with:
  - Polyethylene **basin** with a capacity of 110 litres, equipped with a threaded cover.
  - **Cable glands** for power supply cables (and floats).
  - Rp 1 1/4 or Rp 1 1/2 **delivery pipes** with fast connection and ring nut for easy disassembly of the pump.
  - **3 fast connections**:
    - 1 x DN110 for inlet,
    - 1 x DN50 for ventilation and
    - 1 x DN65 for cable connection.
  - **1 x DN50** fast connection for the manual pump.
  - **DOC or DOMO 7 submersible pump**, vortex or channel impeller type.
  - **QDR control panel** for three-phase versions.
- Versions with **vortex impeller** suitable for:
  - clean water, effluent, sewage containing suspended solids and fibres but non-faecal wastewater.
- Versions with **single or twin channel impeller** suitable for:
  - clean water, effluent, sewage not containing suspended fibres and faecal wastewater.

- **Midibox** can be installed on the floor or buried in a suitable structure following instructions in the "Instructions and Operative Manual".
- **Easy installation**:
  - installation is quick and easy: for the single-phase versions you just connect the pipes and the electrical cables; for the three-phase versions you also need to connect the control panel.
  - The new **Midibox** is provided with side handles for ease of handling.
  - Pre-installed delivery pump and unions.
- **Ecological solution**:
  - tank made from 100% recyclable polyethylene.
- **Easy maintenance and repair**.
  - Tried and tested pump technology.
  - Pump quick and easy to remove thanks to the ring nut located near the cover.

**ACCESSORIES**

- Available accessories:
  - Ball check valves.
  - Alarm kit.
  - Connector kit.
  - Manual pump.

**IDENTIFICATION CODE**

EXAMPLE : MIDIBOX DOMO 7VX  
Lifting station MIDIBOX series with DOMO 7VX submersible electric pump.

**Prefabricated lifting station for wastewater in compliance with EN 12050-1&2 standard**

**SINGLEBOX PLUS Series**

**MARKET SECTORS**

DOMESTIC.

**APPLICATIONS**

- Suitable for delivering gray water and wastewater to main sewer lines located at a higher level, or where gravity drainage is not possible.

**SPECIFICATIONS**

- The standard station is equipped with:
    - polyethylene **basin** with a capacity of 270 litres, equipped with a threaded pedestrian cover (100 kg max).
    - **Cable glands** for power supply cables (and floats).
    - Rp 1 1/2 or Rp 2 **delivery pipes** with fast connection and ring nut for easy disassembly of the pump or with sliding device.
    - **4 fast connections:** 2 x DN110 for inlet, 1 x DN50 for ventilation and 1 x DN65 for cable connection.
    - **1 x DN50** fast connection for the manual pump.
    - **DOMO** or **DL submersible pump**, vortex, channel impeller type or with grinder device.
    - **QDR control panel** for three-phase versions.
    - **3 rubber seal:** 1 x DN110, 1 x DN50 and 1 x DN65 mm.
  - Versions with **vortex impeller** or with **grinder device** suitable for:
    - clean water, effluent, sewage containing suspended solids and fibres.
  - Versions with **single or twin channel impeller** suitable for:
    - clean water, effluent, sewage containing suspended solids but not containing fibres.
  - Special versions equipped with delivery pipes, ball check valve and gate valve.
  - Special versions equipped with sliding device and non-return ball valve.
- **Singlebox plus** can be installed on the floor or buried in a suitable structure following instructions in the "Instructions and Operative Manual".
  - **Easy installation:**
    - installation is quick and easy: for the single-phase versions you just connect the pipes and the electrical cables; for the three-phase versions you also need to connect the control panel.
    - The new **Singlebox plus** is provided with side handles for ease of handling.
    - Pre-installed delivery pump and unions.
  - **Ecological solution:**
    - tank made from 100% recyclable polyethylene.
    - Airtight anti-pollution tank, pursuant to European standard EN 12050.
  - **Easy maintenance and repair.**

## Prefabricated lifting station for wastewater in compliance with EN 12050-1&2 standard

### DOUBLEBOX PLUS Series

#### MARKET SECTORS

DOMESTIC.

#### APPLICATIONS

- Suitable for delivering gray water and wastewater to main sewer lines located at a higher level, or where gravity drainage is not possible.

#### SPECIFICATIONS

- The standard station is equipped with:
  - polyethylene **basin** with a capacity of 550 litres, equipped with two threaded pedestrian covers (100 kg max).
  - **Cable glands** for power supply cables (and floats).
  - 2x Rp 1 1/2 or Rp 2 **delivery pipes** with fast connections and ring nuts for easy disassembly of the pumps or with sliding device.
  - **8 fast connections:**
    - 4 x DN110 for inlet,
    - 2 x DN50 for ventilation and
    - 2 x DN65 for cable connection.
  - **1 x DN50** fast connection for the manual pump.
  - 2x **DOMO** or **DL submersible pumps**, vortex, channel impeller type or with grinder device.
  - QDR2 **control panel** for three-phase versions.
  - **3 rubber seals:**
    - 1 x DN110, 1 x DN50 and
    - 1 x DN65 mm.
- Versions with **vortex impeller** or with **grinder device** suitable for:
  - clean water, effluent, sewage containing suspended solids and fibres.
- Versions with **single or twin channel impeller** suitable for:
  - clean water, effluent, sewage containing suspended solids but not containing fibres.
- Special versions equipped with delivery pipes, ball check valve and gate valve.
- Special versions equipped with sliding device and non-return ball valve.
- **Doublebox plus** can be installed on the floor or buried in a suitable structure following instructions in the "Instructions and Operative Manual".
- **Easy installation:**
  - installation is quick and easy:
    - for the single-phase versions you just connect the pipes and the electrical cables; for the three-phase versions you also need to connect the control panel.
  - The new **Doublebox plus** is provided with side handles for ease of handling.
  - Pre-installed delivery pump and unions.
- **Ecological solution:**
  - tank made from 100% recyclable polyethylene.
  - Airtight anti-pollution tank, pursuant to European standard EN 12050.
- **Easy maintenance and repair.**
  - Tried and tested pump technology.
  - Pump quick and easy to remove thanks to the ring nut located near the cover.

#### ACCESSORIES

- Available accessories:
  - Ball check valves.
  - Alarm kit.
  - Manual pump + seal.
  - Seals kit.

#### IDENTIFICATION CODE

EXAMPLE : DOUBLEBOX PLUS DOMO 10VX SL/BV  
Lifting station DOUBLEBOX PLUS series with DOMO 10VX submersible electric pump with sliding device and non-return valve.

## Prefabricated tanks for lifting stations for wastewater handling according to EN 12050-1 standard

### MAXIBOX PLUS Series

#### MARKET SECTORS

DOMESTIC, COMMERCIAL, INDUSTRIAL.

#### APPLICATIONS

- Suitable for delivering gray water and wastewater to main sewer lines located at a higher level, or where gravity drainage is not possible.

#### SPECIFICATIONS

- The standard tank is equipped with the following components, already assembled:
  - polyethylene **basin** with a capacity of 1200 or 1900 litres.
  - Threaded **cover**.
  - 2 1/2" or 2" **delivery pipes**.
  - **2 DN65 or DN50 sliding device systems**.
  - **2 ball check valves**.
  - **2 gate valves**.
  - Float switches **bracket**.

The supply includes also:

- **Cable glands** for power supply cables and floats.
- **1 rubber seal** for DN160 inlet connection.
- The standard tank doesn't include the pumps, so it **must be completed with**:
  - 2 submersible pumps DOMO, DOMO-GRI, DL, GLS 50/65, GLV 50/65. that have to be ordered separately.
- Selecting the right pump:
  - The pumps with Vortex, Self-cleaning or Grinder impellers are suitable for clean water, effluent and sewage handling that contain suspended solids and fiber materials.
  - The pumps with single or twin channel impellers are suitable for clean water, effluent and sewage handling that contain suspended solids but not fibres.

- Maxibox Plus **must be installed buried** outside the building according to the indications in the installation and operating instructions manual.
- **Ecological solution**:
  - tank made of 100% recyclable polyethylene.
  - watertight anti-pollution tank, according to the EN 12050-1 European standard.
- **Easy maintenance and repair** thanks to the sliding device systems.

#### ACCESSORIES

- Available accessories:
  - Cover clamping system.
  - Float switches.
  - Control panels.
  - Collar extension h 350 mm.
  - Chains.
  - Shackles.
  - Seal kit for DN110 inlet connection.

#### IDENTIFICATION CODE

EXAMPLE : MAXIBOX PLUS 13 - 50  
MAXIBOX PLUS series tank, tank height 1,3 metres, pipe dimension DN 50.

# **TECHNICAL APPENDIX**

## WATER REQUIREMENTS IN CIVIL USES

Determination of the water requirement depends on the type of users and contemporaneity factor. The calculation may be subject to regulations, standards or customs that may vary from country to country. The calculation method shown below is an example based on practical experience, designed to provide a reference value and not a substitute for detailed analytical calculation.

### Water requirements in condominiums.

The **consumption table** shows the maximum values for each delivery point, depending on the plumbing amenities.

### MAXIMUM CONSUMPTION FOR EACH DELIVERY POINT

TYPE	CONSUMPTION (l/min)
Sink	9
Dishwasher	10
Washing machine	12
Shower	12
Bathtub	15
Washbasin	6
Bidet	6
Flush tank WC	6
Controlled flushing system WC	90

G-at-cm-en\_a\_th

The **sum of the water consumption values** of each delivery point determines the maximum theoretical requirement, which must be reduced according to the **contemporaneity coefficient**, because in actual fact the delivery points are never used all together.

$$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}} \quad \text{Coefficient for apartments with one bathroom and flush tank WC}$$

$$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}} \quad \text{Coefficient for apartments with one bathroom and controlled flushing system WC}$$

$$f = \frac{1,03}{\sqrt{(0,545 \times Nr \times Na)}} \quad \text{Coefficient for apartments with two bathrooms and flush tank WC}$$

$$f = \frac{0,8}{\sqrt{(0,727 \times Nr \times Na)}} \quad \text{Coefficient for apartments with two bathrooms and controlled flushing system WC}$$

f = coefficient; Nr = number of delivery points; Na = number of apartments

The **table of water requirements in civil uses** shows the maximum contemporaneity flow-rate values based on the **number of apartments** and the type of WC for apartments with one bathroom and two bathrooms.

As regards apartments with one bathroom, 7 drawing points have been taken into consideration, while 11 points have been considered for apartments with two bathrooms. If the number of drawing points or apartments is different, use the formulas to **calculate** the requirement.

## TABLE OF WATER REQUIREMENTS IN CIVIL USES

NUMBER OF APARTMENTS	WITH FLUSH TANK WC		WITH CONTROLLED FLUSHING SYSTEM WC

180	425	530	811	1056
200	448	559	854	1114

For seaside resorts, a flow rate increased by at least 20% must be considered.

G-at-fi-en\_a\_th

## WATER REQUIREMENTS FOR COMMUNITY BUILDINGS

The requirements of buildings intended for specific uses, such as **offices, residential units, hotels, department stores, nursing homes** and so on, are different from those of condominiums, and both their global daily water consumption and the maximum contemporaneity flow rate usually greater. The **diagram of water requirements for community buildings** shows the maximum contemporaneity flow rate of some types of communities, for guidance.

These requirements must be determined case by case with the utmost accuracy, using analytical calculation methods according to particular needs and local provisions.

For seaside resorts, the flow rate must be increased by at least 20%.

- 1 = Offices (Nr. of people)
- 2 = Department stores (Nr. of people)
- 3 = Nursing homes (Nr. of beds)
- 4 = Hotels, residences (Nr. of beds)

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (\text{NPSH}_r + 0.5) + h_f + h_{pv} \quad \textcircled{1}$$

where:

- $h_p$**  is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $h_p$  is the quotient between the barometric pressure and the specific weight of the liquid.
- $h_z$**  is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.
- $h_f$**  is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.
- $h_{pv}$**  is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the Pv vapour pressure and the liquid's specific weight.
- 0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4° C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

Water temperature (°C)	20	40	60	80	90	110	120
Suction loss (m)	0,2	0,7	2,0	5,0	7,4	15,4	21,5

Elevation above sea level (m)	500	1000	1500	2000	2500	3000
Suction loss (m)	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables at pages 43-44 of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~15°C  $\gamma = 1 \text{ kg/dm}^3$

Flow rate required: 30 m<sup>3</sup>/h

Head for required delivery: 43 m.

Suction lift: 3,5 m.

The selection is an FHE 40-200/75 pump whose NPSH required value is, at 30 m<sup>3</sup>/h, di 2,5 m.

For water at 15 °C

$$h_p = P_a / \gamma = 10,33\text{m}, h_{pv} = P_v / \gamma = 0,174\text{m} (0,01701 \text{ bar})$$

The  $H_f$  flow resistance in the suction line with foot valves is ~ 1,2 m.

By substituting the parameters in formula  $\textcircled{1}$  with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2,5 + 0,5) + 1,2 + 0,17$$

from which we have: 6,8 > 4,4

The relation is therefore verified.

## FLOW RESISTANCE TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en\_a\_th

The table is valid for the Hazen Williams coefficient  $C=100$  (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara, and Vogel range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara and Vogel products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

**FURTHER PRODUCT SELECTION AND DOCUMENTATION**

**Xylect**

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every user has a My Xylect space, where all projects are saved.

For more information about Xylect please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're 12,000 people unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.
